The course also describes the risk factors for the major cancers worldwide, including lung cancer, breast cancer, colon cancer, prostate cancer, liver cancer, and stomach cancer.

Jun 01, Introduction to Cancer Biology is a well-structured, concise summary of the essential fundamentals of cancer biology. It introduces readers to the epidemiology of the disease on a global scale and highlights the significant trends and various risk factors affecting the types and frequency of cancer worldwide. Introduction to Cancer Biology 10 How cancer arises Cancers arise approximately in one among every 3 individuals. DNA mutations arise normally at a frequency of 1 in every 20 million per gene per cell division. The average number of cells formed in any individual during an average lifetime is (10 million cells being replaced every second!). This concise overview of the fundamental concepts of cancer biology is ideal for those with little or no background in the field. A summary of global cancer patterns introduces students to the general principles of how cancers arise and the risk factors involved.

Conversion of a proto-oncogene to an oncogene causes cancer. Mutations in proto-oncogenes can lead to abnormal stimulation of the cell cycle. Tumor-suppressor genes: normal genes that help to prevent uncontrolled cell growth.

Introduction to Cancer Biology is a short primer on how cancers develop and grow. The aim of this book is to provide a gentle exploration of the fundamental concepts in a easy-to-understand format, using examples and key figures for illustration.
